

Create and modify a dashboard guide part 2

Add dashboard actions

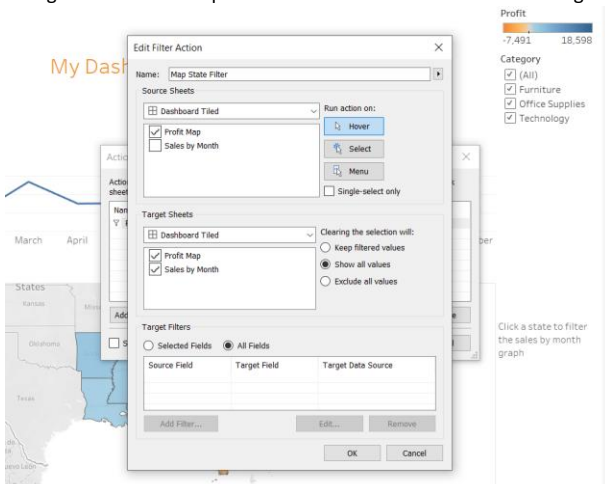

1. From the Dashboard tab select Actions

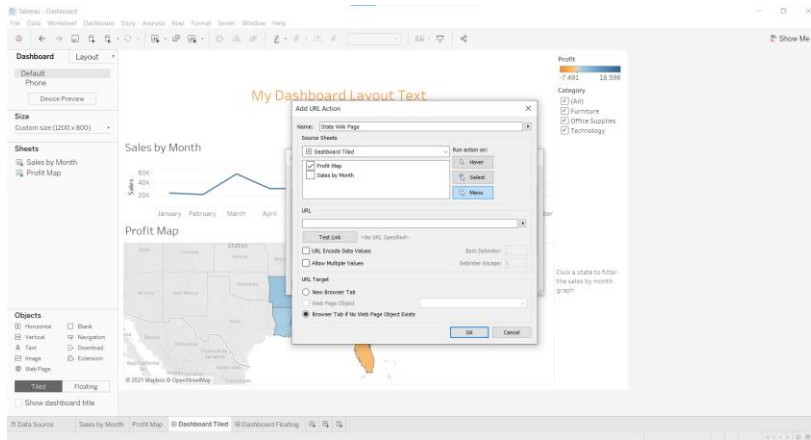

2. You will notice that there is already an action created – when we clicked the Use as Filter button for the map visual

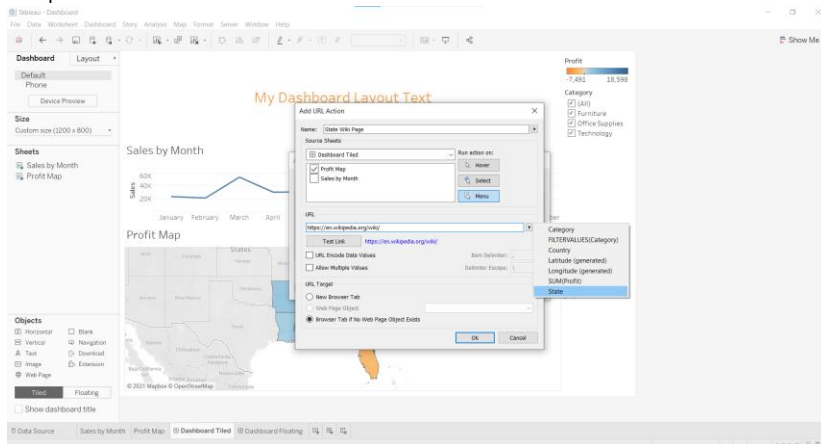

3. We can edit the filter action settings and change it's name, the target sheets, the behaviour after cleaning the selection etc. Let's change the name to Map State Filter and the Run Action on setting to Hover. After this we can see how the action changed.

4. We can add an URL action from Dashboard tab -> Actions -> Add action -> Go to URL. Set the name as State Wiki Page

5. In the URL box enter the following link - <https://en.wikipedia.org/wiki/>, click the arrow from the right and select State. Set the Run On option to Menu and click Ok

Modify existing layout for mobile devices

6. From Dashboard tab -> Device Layouts -> Add Phone
